

**CMSC-621, PROJECT 2(BERKELEY'S CLOCK SYNC)
SHREYA DATE (PQ56297)**

STEPS TO RUN

Daemon:

1. Open terminal 1
2. Traverse to src dir
3. Build daemon and multiple servers using make (make has 2 targets)
4. Run server using `./daemon <input_file> <daemon_time>`

Servers/Processes in a Distributed system:

1. Open terminal 2
2. Traverse to src dir
3. Create client using make
4. In another terminal, run the shell script `multiple_processes.sh`
5. The `multiple_processes.sh` contains,
 `./server <port_num> <server_name>&`
 `port_num` and `server_name` should be present in the `input.csv`

`input.csv` contains comma separated `server_name`, `port_num`

`multiple_processes.sh` contains command to run each server using the specified port number.

The port number for each client should match the port number specified in the `input.csv` given to the daemon.
